PROFESSIONAL SUMMARY

Senior Android Platform Engineer with **8+ years of experience** designing, developing, and modernizing Android applications across **Utilities, FinTech, Healthcare, Insurance, and Consumer** domains. Expertise in **Kotlin, Jetpack Compose, Java, MVVM, Clean Architecture, and Android Jetpack** for building scalable, maintainable, and high-quality mobile solutions. Strong experience in offline-first architecture, performance optimization, secure API integration, and application modernization. Proven ability to improve code quality, enhance user experience, and collaborate with cross-functional teams to deliver business-critical Android applications. Passionate about solving complex engineering challenges through scalable architecture, performance engineering, and engineering best practices.

CORE TECHNICAL SKILLS

Programming Languages: Kotlin, Java, SQL

Android Development: Android SDK, Jetpack Compose, XML, Material Design 3, AndroidX, CameraX, Google Maps SDK, Media3, Lottie

Architecture: MVVM, Clean Architecture, Multi-Module Architecture, Repository Pattern, SOLID Principles, Offline-First Architecture

Jetpack Libraries: Navigation, ViewModel, Room, WorkManager, Paging 3, DataStore

Concurrency: Coroutines, Flow, StateFlow, SharedFlow

Networking: Retrofit, OkHttp, REST APIs

Dependency Injection: Hilt, Dagger

Firebase: Authentication, Cloud Messaging (FCM), Analytics, Crashlytics, Remote Config

Security: Android Keystore, Biometric Authentication, Encrypted SharedPreferences

CI/CD & DevOps: Git, GitHub, GitHub Actions, Jenkins, Fastlane

Tools: Android Studio, IntelliJ IDEA, Postman, JIRA, Confluence, Figma

KEY ACHIEVEMENTS

- Collaborated Designed and delivered scalable enterprise Android applications using modern architecture and engineering best practices.
- Built reliable offline-first mobile solutions with seamless background synchronization for uninterrupted user experiences.
- Improved application performance through startup optimization, memory management, lifecycle optimization, and ANR reduction.
- Modernized legacy Android applications using modular architecture and reusable Jetpack Compose components, improving maintainability.

- Delivered secure Android applications through robust API integration, biometric authentication, encrypted storage, and Firebase services.
- Contributed to technical design, code reviews, mentoring, and Agile delivery while collaborating with cross-functional engineering teams.

PROFESSIONAL EXPERIENCE

EXL Service — Senior Software Engineer (Android Platform) | Noida | Oct 2023 – Present

Client:- Thames Water (UK)

- Designed and delivered enterprise Android applications using modern architecture, improving scalability and maintainability.
- Architected offline-first mobile features with reliable background synchronization for uninterrupted user experiences
- Modernized legacy applications through modular architecture, reusable UI components, and codebase refactoring
- Integrated secure REST APIs with robust networking, caching, and error-handling mechanisms
- Optimized application performance through startup optimization, memory management, lifecycle improvements, and ANR reduction.
- Implemented secure authentication, encrypted local storage, and Firebase services to improve application security and reliability.
- Collaborated with cross-functional teams on technical design, code reviews, sprint planning, and production releases
- Mentored developers and promoted Android best practices, reusable architecture, and engineering standards

Freelance Senior Android Engineer | Remote | International Clients | May 2022 – Oct 2023

(Client/Product details confidential under NDA)

- Developed Android applications for international clients using modern Android architecture and best practices.
- Built reusable application components and scalable architectures to accelerate feature delivery.
- Integrated secure REST APIs, third-party SDKs, and Firebase services across multiple projects.
- Implemented offline data persistence, synchronization, and responsive user experiences.
- Worked directly with global stakeholders to deliver high-quality production-ready Android solutions.

EXL Service — Software Engineer (Android) | Noida | Dec 2017 – Apr 2022

Client:- wolters kluwer (USA)

- Developed and maintained Android applications using Kotlin, Java, and Android SDK.
- Implemented REST APIs, Firebase services, and local storage solutions
- Built responsive user interfaces and optimized application performance across Android devices.
- Collaborated with designers, backend developers, and QA teams to deliver quality mobile applications.

FEATURED PROJECTS

Enterprise Field Operations Platform

Overview

Designed and developed a scalable enterprise Android application to streamline field workforce operations, enabling technicians to manage work orders, asset inspections, customer visits, and service reports through a secure offline-first mobile platform. The application was built to operate reliably in low or no-network environments while ensuring seamless synchronization with backend enterprise systems.

Key Responsibilities

- Designed and implemented scalable Android features using Kotlin, Jetpack Compose, MVVM, and Clean Architecture to improve maintainability and long-term scalability.
- Architected an offline-first synchronization engine using Room, WorkManager, Coroutines, and Flow to ensure reliable data availability and automatic background synchronization.
- Developed reusable Jetpack Compose UI components and feature-based modular architecture to accelerate feature development and reduce technical debt.
- Integrated secure REST APIs using Retrofit and OkHttp with robust error handling, intelligent caching, and retry mechanisms for resilient network communication.
- Optimized application startup time, rendering performance, memory utilization, and background processing to improve responsiveness and overall application stability.
- Implemented secure authentication, encrypted local data storage, and Firebase services to enhance application security and reliability.
- Collaborated with Product Managers, Solution Architects, Backend Engineers, UX Designers, and QA teams throughout technical design, implementation, testing, and production releases.

Business Impact

- Improved field workforce productivity through reliable offline access and automated background synchronization.
- Enhanced application scalability and maintainability by adopting modular architecture and reusable UI components.
- Increased application stability, responsiveness, and user satisfaction through continuous performance optimization and engineering best practices.

AI-powered Personal Finance Platform

Overview

Designed and developed an intelligent Android-based personal finance application that enables users to securely manage expenses, budgets, digital payments, and financial insights. The application leverages AI-assisted expense categorization, smart budgeting, and offline-first architecture to provide a secure, scalable, and user-friendly financial management experience.

Key Responsibilities

- Developed modern Android features using Kotlin, Jetpack Compose, MVVM, and Clean Architecture while ensuring scalable and maintainable application architecture.
- Implemented AI-assisted expense categorization, intelligent budgeting recommendations, and financial analytics to improve user engagement and financial planning.
- Built secure payment workflows by integrating REST APIs, Firebase Authentication, encrypted local storage, and biometric authentication.
- Designed offline-first data management using Room, WorkManager, Coroutines, and Flow to maintain uninterrupted access and reliable synchronization.
- Developed reusable Compose components, responsive dashboards, interactive charts, and intuitive financial reports to improve user experience.
- Optimized application performance through efficient state management, background processing, caching strategies, and memory optimization.
- Collaborated with cross-functional teams to deliver production-ready features while maintaining high engineering standards, code quality, and Agile development practices.

Business Impact

- Simplified personal finance management through intelligent automation and actionable financial insights.
- Improved application security by implementing encrypted storage, secure authentication, and reliable API communication.
- Delivered a scalable, maintainable, and high-performance Android application capable of supporting future feature expansion.

Leadership & Technical Contributions

- Led technical discussions and contributed to Android architecture decisions for scalable and maintainable applications.
- Performed code reviews, mentored developers, and promoted Android development best practices.
- Collaborated with Product Managers, Designers, Backend Engineers, and QA teams to deliver business-critical mobile solutions.
- Supported Agile delivery through technical planning, sprint execution, release management, and continuous engineering improvements.

PROFESSIONAL CERTIFICATIONS

- **Generative AI Explained:** Concepts and Prompting Techniques
- **Generative AI :** Case Studies in Prompt Engineering (COURSE)
- **Generative AI on AWS**
- **Google Professional Cloud Developer (CERTIFICATION_PATH)**

EDUCATION

Master of Computer Applications (MCA)

Institute of Engineering & Technology (2014 – 2016)

Bachelor of Computer Applications (BCA)

Institute of Engineering & Technology, Alwar (2011 – 2014)
