Portfolio: <https://nishantmodi92.github.io>

PROFESSIONAL SUMMARY

Senior Android Platform Engineer with **8+ years of experience** designing, modernizing, and delivering scalable Android applications across **Utilities, FinTech, Healthcare, Insurance, and Consumer** domains.

Strong expertise in **Kotlin, Jetpack Compose, Android SDK, MVVM, Clean Architecture, Multi-Module Architecture, Coroutines, Flow, Room, WorkManager, Hilt, Retrofit, Firebase, and modern Android Jetpack libraries.**

Experienced in **offline-first architecture, application modernization, modularization, secure mobile development, REST API integration, CI/CD, performance optimization, reusable UI systems, and production delivery.**

Currently contributing to enterprise Android solutions for an international utilities client, collaborating within a **15-member cross-functional engineering team** and contributing across architecture, development, code reviews, CI/CD, releases, and technical mentoring.

Continuously expanding expertise through hands-on learning and proof-of-concept development in **AI-powered Android experiences, Kotlin Multiplatform, modern Android performance tooling, and next-generation platform capabilities.**

CORE TECHNICAL EXPETISE

Languages:- Kotlin • Java • SQL

Android Development:- Android SDK • Jetpack Compose • AndroidX • XML • Material Design 3 • CameraX • Media3 • Google Maps SDK • Lottie Animation

Architecture & Design:- MVVM • Clean Architecture • Multi-Module Architecture • Repository Pattern • SOLID Principles • Offline-First Architecture • Scalable Mobile Architecture

Jetpack Libraries:- Navigation Component • ViewModel • Room • WorkManager • Paging 3 • DataStore

Concurrency:- Kotlin Coroutines • Flow • StateFlow • SharedFlow

Networking:- Retrofit • OkHttp • REST APIs • JSON

Dependency Injection:- Hilt • Dagger

Firebase:- Authentication • Cloud Messaging (FCM) • Analytics • Crashlytics • Remote Config

Security:- Android Keystore • Biometric Authentication • Encrypted SharedPreferences • Secure API Communication

Performance Engineering:- Startup Optimization • Memory Optimization • ANR Reduction • Background Processing • Rendering Optimization • Lifecycle Optimization • Performance Monitoring

Build & CI/CD: Gradle • Git • GitHub • GitHub Actions • Jenkins • Fastlane

Tools:- Android Studio • IntelliJ IDEA • Postman • JIRA • Confluence • Figma

EMERGING TECHNOLOGIES — HANDS-ON LEARNING & POCs

Kotlin Multiplatform (KMP) • Compose Multiplatform • Gemini API • ML Kit • Baseline Profiles • Macrobenchmark • Perfetto • JankStats • Credential Manager API • Play Integrity API • Proto DataStore • KSP

Hands-on learning, experimentation, and proof-of-concept exposure; not represented as production experience unless explicitly stated.

PROFESSIONAL EXPERIENCE

EXL Service — Senior Software Engineer (Android Platform) | Noida | Oct 2023 – Present

Client: Thames Water (United Kingdom)

Oct 2023 – Present | Noida, India

Enterprise Field Operations Platform

Tech Stack: Kotlin • Jetpack Compose • Android SDK • MVVM • Clean Architecture • Multi-Module Architecture • Coroutines • Flow • Room • WorkManager • DataStore • Hilt • Retrofit • OkHttp • Firebase • Android Keystore • Biometric Authentication • GitHub Actions • Jenkins • Fastlane

Key Contributions

- **Architect and develop** enterprise Android solutions using Kotlin, Jetpack Compose, Clean Architecture, MVVM, and Multi-Module Architecture, supporting scalable and maintainable application development.
- **Design offline-first workflows** using Room, WorkManager, Coroutines, Flow, and DataStore to provide reliable local data access and background synchronization in low-connectivity environments.
- **Modernize legacy Android components** through Jetpack Compose adoption, modularization, reusable UI components, and targeted architecture refactoring.
- **Engineer resilient networking layers** using Retrofit and OkHttp with structured API abstraction, caching, retry handling, request/response management, and centralized error handling.
- **Implement secure mobile capabilities** using Android Keystore, biometric authentication, encrypted local storage, Firebase Authentication, and secure API communication.
- **Optimize application performance and stability** across startup, memory usage, lifecycle handling, rendering, background execution, and ANR-prone workflows.
- **Contribute to delivery across a 15-member cross-functional engineering team**, collaborating with Product, Architecture, Backend, QA, UX, and business stakeholders from technical design through production release.
- **Own end-to-end feature delivery** including requirement analysis, technical design, implementation, debugging, code review, CI/CD, release coordination, and post-release support.
- **Mentor Android engineers** and contribute to architecture reviews, coding standards, technical discussions, knowledge sharing, and continuous engineering improvements.

Freelance Senior Android Engineer | Remote | International Clients | May 2022 – Oct 2023

(Client/Product details confidential under NDA)

Tech Stack: Kotlin • Java • Android SDK • Jetpack • MVVM • Clean Architecture • Coroutines • Flow • Room • Retrofit • OkHttp • Firebase • REST APIs • Git

Key Contributions

- Developed and delivered Android applications using **Kotlin, Java, Android Jetpack, MVVM, and Clean Architecture** for international clients.
- Designed reusable UI and application components to improve maintainability and provide consistent implementation patterns across projects.
- Integrated RESTful APIs using **Retrofit and OkHttp**, implementing structured networking, response handling, error management, and efficient data communication.
- Implemented local persistence and background processing using **Room, Coroutines, Flow, and Android background execution patterns**.
- Integrated Firebase Authentication, FCM, and Analytics to support secure authentication, notifications, and application capabilities.
- Improved application reliability through code refactoring, lifecycle-aware development, debugging, and Android engineering best practices.
- Collaborated directly with international stakeholders across requirements, estimation, sprint planning, implementation, code reviews, releases, and production support.

EXL Service — Software Engineer (Android) | Noida | Dec 2017 – Apr 2022

Client:- wolters kluwer (USA)

Tech Stack: Java • Kotlin • Android SDK • XML • Android Jetpack • MVVM • Room • SQLite • Retrofit • REST APIs • Firebase • Git

Key Contributions

- Developed and maintained enterprise Android applications using **Java, Kotlin, Android SDK, XML, MVVM, and Android Jetpack**.

- Implemented reusable application features and components following structured architecture and clean coding practices.
- Integrated REST APIs and backend services using Retrofit and JSON-based communication for reliable mobile-server data exchange.
- Implemented local persistence using **Room and SQLite** to support efficient data management and offline application workflows.
- Developed lifecycle-aware and background-processing capabilities to support responsive and reliable application behavior.
- Integrated Firebase services including Authentication, Cloud Messaging, and Analytics.
- Collaborated with Product, Backend, QA, and UX teams throughout requirements, development, defect resolution, sprint execution, and production releases.

FEATURED PROJECTS

Enterprise Field Operations Platform

Domain: Utilities | **Client:** Thames Water, UK

Tech Stack: Kotlin • Jetpack Compose • Clean Architecture • MVVM • Room • WorkManager • Coroutines • Flow • Hilt • Retrofit • Firebase

- Built enterprise Android workflows around **offline-first architecture**, local persistence, background synchronization, and resilient networking.
- Modernized application components using **Jetpack Compose, reusable UI components, and modular architecture**.
- Focused on secure mobile development, application performance, maintainability, and reliable field operations.

AI-Enabled Personal Finance Platform

Tech Stack: Kotlin • Jetpack Compose • MVVM • Clean Architecture • Room • Retrofit • Firebase

- Developed a modern Android finance application supporting expense tracking, budgeting, and financial insights.
- Implemented reusable Compose UI components, structured API integration, local persistence, and scalable application architecture.
- Explored AI-assisted capabilities through **hands-on learning and proof-of-concept integrations**.

Healthcare & Fitness Tracker

Tech Stack: Kotlin • Jetpack Compose • Google Fit API • Room • WorkManager

- Developed Android features for activity tracking, fitness insights, and background synchronization.
- Integrated Google Fit APIs and applied modern Android architecture for maintainable and responsive application workflows.
- Implemented reliable local data management and background processing using Room and WorkManager.

ENGINEERING LEADERSHIP & COLLABORATION

- Mentor Android engineers on **Kotlin, Jetpack Compose, Clean Architecture, debugging, and Android engineering best practices**.
- Participate in architecture reviews, code reviews, technical design discussions, sprint planning, release planning, and Agile ceremonies.
- Collaborate with Product Managers, Solution Architects, Backend Engineers, QA Engineers, UX Designers, and business stakeholders.
- Promote reusable components, modular development, coding standards, documentation, and continuous engineering improvements.

PROFESSIONAL ACHIEVEMENT

Star Performance Award — EXL Service Pvt. Ltd. | June 2026

Recognized for engineering excellence, ownership, collaboration, and consistent delivery of high-quality solutions.

CERTIFICATIONS

- Google Cloud – Generative AI Learning Path
- AWS Educate – Introduction to Generative AI
- Google Cloud Skills Boost – Generative AI Explained

EDUCATION

Master of Computer Applications (MCA)

Institute of Engineering & Technology (2014 – 2016)
