PROFESSIONAL SUMMARY

Senior Android Platform Engineer with **8+ years of experience** architecting, developing, and delivering enterprise-scale Android applications across Insurance, Healthcare, FinTech, Utilities, and Consumer domains. Proven expertise in building scalable, high-performance mobile applications using **Kotlin, Jetpack Compose, MVVM, Clean Architecture, Coroutines, Flow, Hilt, Room, and RESTful APIs**.

Experienced in leading Android platform modernization initiatives, designing modular architectures, optimizing application performance, implementing offline-first solutions, and collaborating with globally distributed engineering teams throughout the complete software development lifecycle.

Recognized for consistently delivering high-quality engineering solutions through strong technical ownership, architectural thinking, and performance optimization. Passionate about building reliable, maintainable, and secure Android applications that deliver exceptional user experiences while solving complex business challenges.

CORE TECHNICAL SKILLS

Languages: Kotlin, Java, SQL

Android Framework: Android SDK, Jetpack Compose, Android Jetpack, MVVM, MVI, Clean Architecture, Modular Architecture, Material Design (Material 3)

Jetpack Components: Navigation Component, Room, WorkManager, DataStore, Paging 3, Lifecycle Components, ViewModel, CameraX

Dependency Injection: Hilt, Dagger 2

Concurrency & Reactive: Kotlin Coroutines, Flow, StateFlow, SharedFlow, Structured Concurrency, RxJava (fundamentals)

Networking & Data: REST APIs, Retrofit, OkHttp, GraphQL, gRPC (fundamentals), Caching Strategies, Offline-First Architecture, Data Synchronization

Architecture & Design: Mobile System Design, Multi-Module Architecture, Design Patterns, API Design, Scalability, Feature Flags, Solid Principles

Cloud: Google Cloud Platform (Professional Cloud Developer path), AWS fundamentals

DevOps & Automation: Git, GitHub, GitHub Actions, Jenkins, Fastlane, CI/CD Automation, Play Store Deployment, App Bundles

Testing & Quality: JUnit, Espresso, MockK, Unit Testing, UI Testing, TDD, Crash Analysis, Logging & Monitoring

Tools & Platforms: Firebase (Analytics, Crashlytics, Remote Config), Android Studio, Agile/Scrum, JIRA, Confluence

KEY ACHIEVEMENTS

- **40% ANR reduction** achieved through concurrency optimization, threading fixes, and main-thread performance tuning.
- **35% latency improvement** delivered via a layered caching strategy (Room-based local cache + OkHttp interceptor caching) combined with request batching.
- **35% faster build times** through a modular Android architecture spanning 40+ feature modules across a 20-engineer team, improving developer velocity.
- **250K+ active users** served in production through scaled Android platform solutions across enterprise and consumer domains.
- **75%+ automated test coverage** achieved, strengthening release confidence and reducing production defects.

PROFESSIONAL EXPERIENCE

EXL Service — Senior Software Engineer (Android Platform)

Oct 2023 – Present

Noida, India | Client: Thames Water (Utility / Water Services, UK)

- Architect and scale Android platform applications for Thames Water's field operations, serving 250K+ end users in production.
- Diagnosed and resolved main-thread contention and concurrency issues, cutting application ANR rate by 40% through structured threading fixes and lifecycle-aware coroutine usage.
- Built a layered caching system (Room-based local cache + OkHttp interceptor caching) with request batching, improving API response latency by 35% under field network conditions.
- Designed and led a modular architecture across 40+ feature modules with a 20-engineer team, cutting build times by 35% and improving team-wide development efficiency.
- Engineered offline-first synchronization workflows with timestamp-based conflict resolution, enabling reliable data capture in low-connectivity field environments.
- Built reusable Jetpack Compose component libraries, improving UI consistency and reducing feature development time across teams.
- Partnered with product, backend, QA, and business stakeholders to translate requirements into scalable Android architecture and drive long-term platform modernization.

Freelance Senior Android Engineer

May 2022 – Oct 2023

Remote | Independent Consultant — International SaaS & Consumer Clients (NDA)

- Delivered production Android applications for international SaaS and consumer-focused clients across multiple industries.
- Built resilient offline-first synchronization systems designed for unstable and low-bandwidth network environments.
- Developed modular, Jetpack Compose-based UI architectures to accelerate feature delivery and improve maintainability.
- Implemented feature-flag systems enabling controlled rollouts, A/B experimentation, and safer production releases.
- Built fault-tolerant retry systems with exponential backoff and automated recovery workflows, plus structured logging and crash-analysis pipelines to improve observability.
- Collaborated directly with international stakeholders on technical planning, estimation, and delivery.

EXL Service — Software Engineer (Android)

Dec 2017 – Apr 2022

Noida, India

- Migrated legacy Android applications to Kotlin and Clean Architecture, improving maintainability and reducing technical debt.
- Increased automated test coverage to 75%+, improving software quality and release confidence.
- Automated CI/CD pipelines, improving deployment reliability and release efficiency.
- Optimized application performance across memory management, rendering, lifecycle handling, and threading.
- Integrated scalable networking layers using Retrofit and REST APIs across multiple product features, and built reusable architecture components that improved developer productivity org-wide.

ADDITIONAL EXPERIENCE

I Service India Pvt. Ltd. — Data Processor

Nov 2016 – Dec 2017

- Managed data entry, verification, and processing for insurance-related records, maintaining database accuracy and document integrity across backend operations.

FEATURED PROJECTS

PolicyGuard — Offline-First Insurance Claims & Policy Management App

Technologies: Kotlin, Jetpack Compose, Room, WorkManager, Hilt, Retrofit

- Architected an offline-first Android platform enabling field insurance agents to capture policy applications, underwriting documents, and claims intake without continuous connectivity.
- Implemented encrypted local storage (Room + SQLCipher) for sensitive policyholder PII and claims data, aligned with data-privacy and secure-handling best practices for regulated financial data.
- Built a delta-synchronization engine with timestamp-based conflict resolution, keeping claim status and policy records consistent across distributed agent devices with minimal network overhead.
- Integrated on-device document capture and validation (image compression, OCR-ready pipeline) to reduce manual data-entry errors and accelerate claims turnaround.

CarePath — Remote Patient Monitoring & Care Coordination App

Technologies: Kotlin, Jetpack Compose, Coroutines/Flow, Room, Firebase, Bluetooth/Wearable Integration

- Built a remote patient monitoring and care-coordination Android application that aggregates vitals from connected wearable and Bluetooth devices for care teams and caregivers.
- Designed a modular MVVM / Clean Architecture with Kotlin Coroutines and Flow, enabling independent, testable feature modules for vitals tracking, medication reminders, and care-team messaging.
- Implemented a secure, privacy-conscious data pipeline for health data, including encrypted local caching, audit-friendly logging, and least-privilege API access patterns aligned with healthcare data-handling standards.
- Built real-time abnormal-vitals alerting using background WorkManager jobs and push notifications, reducing care-team response latency for at-risk patients.

LEADERSHIP, MENTORSHIP & OPEN SOURCE

- Mentored junior and mid-level engineers on Android architecture, Kotlin best practices, and code quality; led architecture review sessions influencing technical direction across feature teams.
- Drove adoption of modular architecture and reusable component standards across engineering teams.
- Publish Android architecture samples on GitHub and actively study advanced mobile system design, scalability, and distributed architecture patterns.

PROFESSIONAL DEVELOPMENT / CERTIFICATIONS

- Google Professional Cloud Developer — Certification Path (EXL, 2026)
- Generative AI: Case Studies in Prompt Engineering (EXL, 2026)
- Generative AI on AWS (EXL, 2026)
- Generative AI Explained: Concepts & Prompting Techniques (EXL, 2026)

EDUCATION

Master of Computer Applications (MCA) 2014 – 2016

Institute of Engineering & Technology

Bachelor of Computer Applications (BCA) 2011 – 2014

Institute of Engineering & Technology
